

Methods and Case Studies for Holistic Ship Design and Optimization

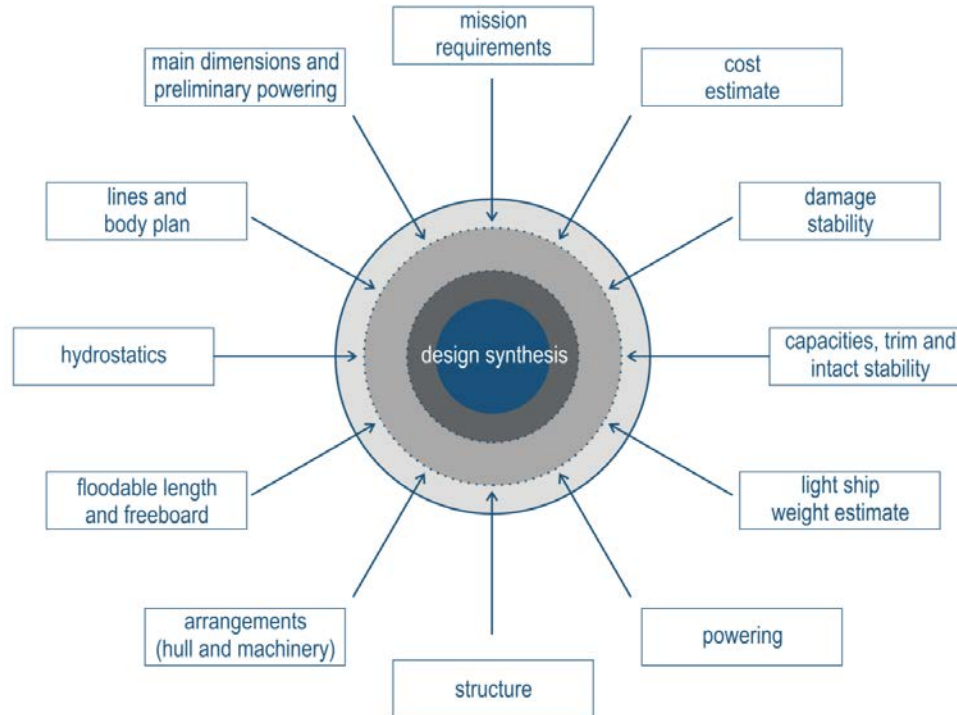

Introduction

■ HOLISHIP

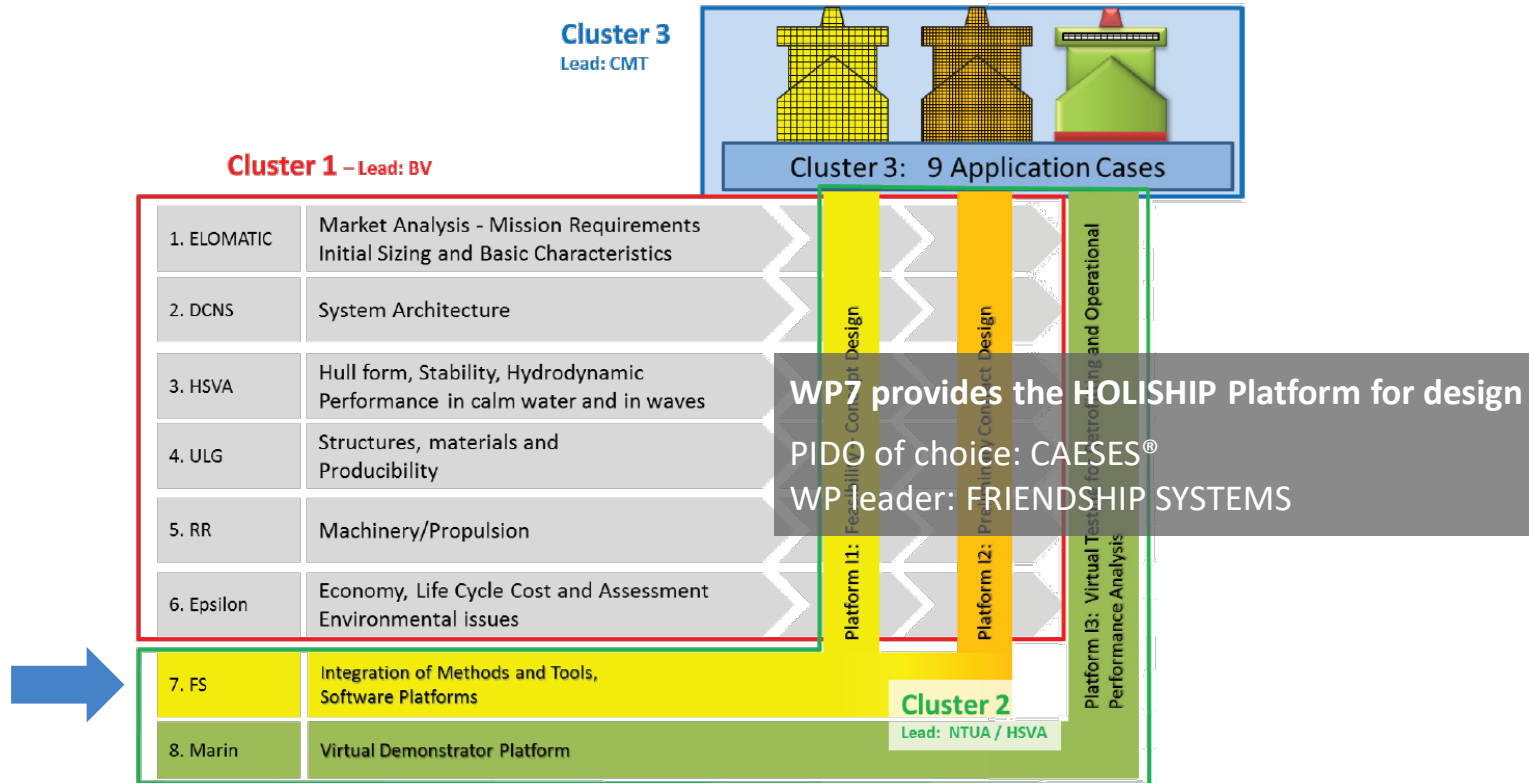

- *HOL*istic optimisation of *SHIP* design and operation for life cycle
- European R&D project
- 40 partners
- Funded within the European Union's Horizon 2020 Transport Research Programme
- Develop the next generation ship design system for the European maritime industry

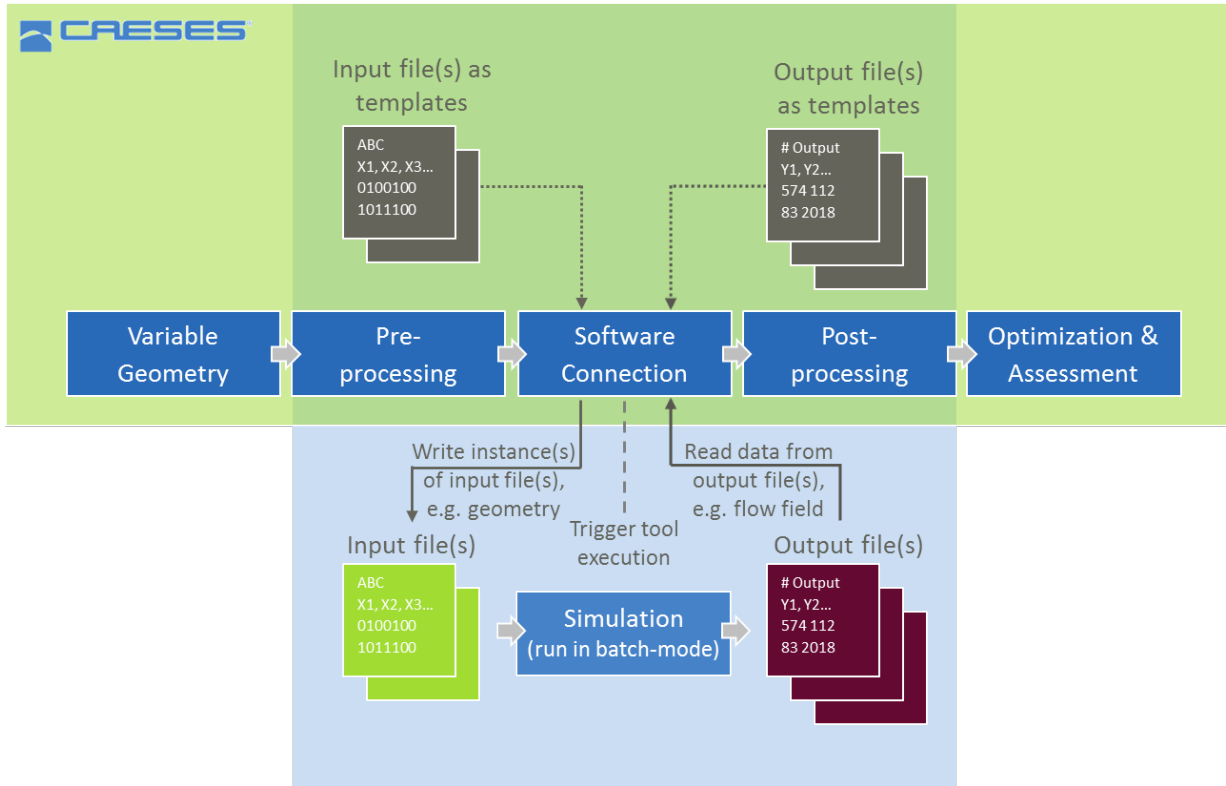

Motivation

Project Setup

Tool Integration

Case Studies

Case Study | Double-ended Ferry

1h return trip in Scandinavian waters

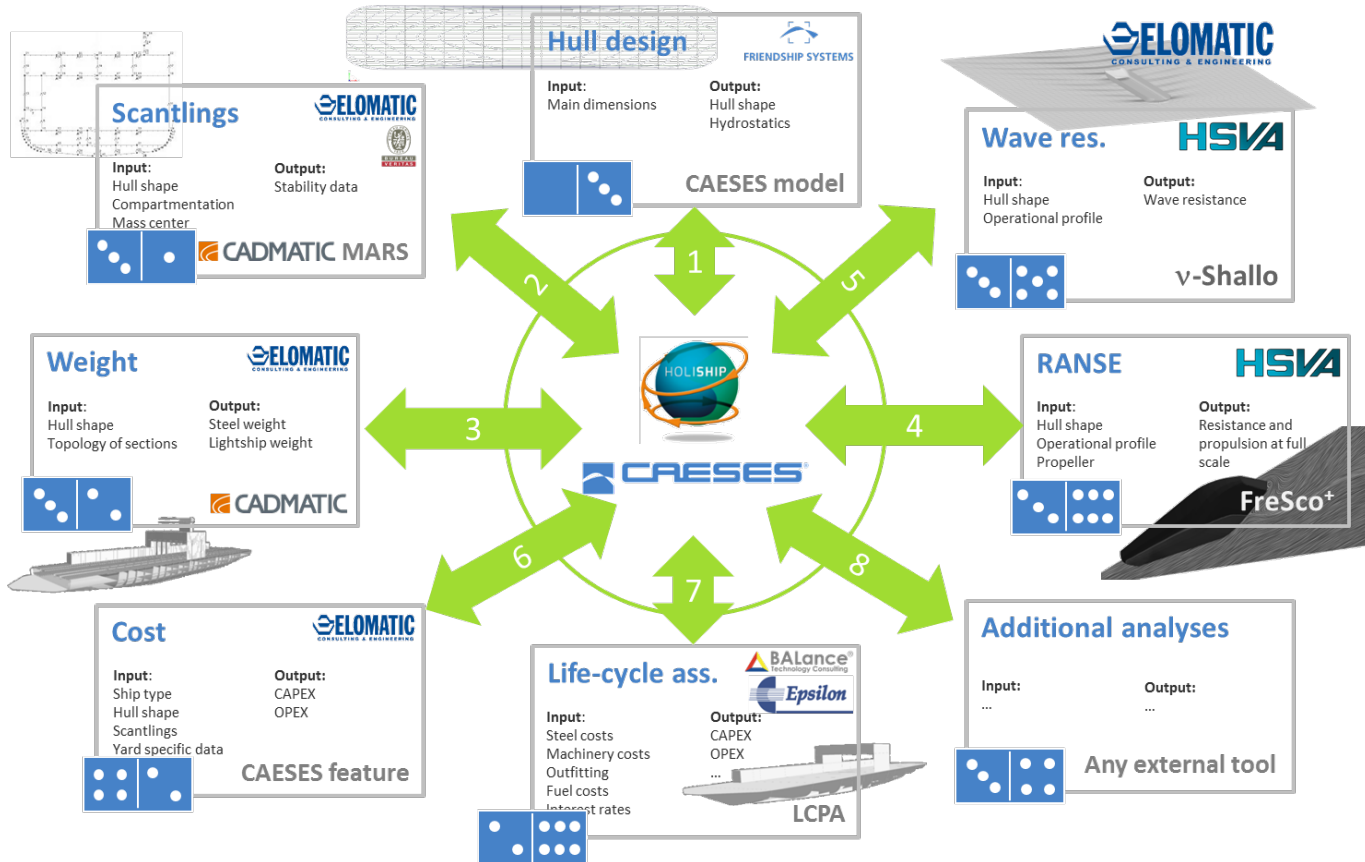

10 nm at a service speed of 13 kn

Length from 110 m to 135 m and beam from 17.5 m to 22 m

Conventional and electric propulsion as alternatives

Case Study | Double-ended Ferry

Case Study | RoPax

FINCANTIERI
CETENA

24h service in the Mediterranean Sea
Piraeus (mainland Greece) and Heraklion (Crete)

Daytrip of 6.5 hours at 27 kn and
return trip of 8.3 hours at 21 kn during the night

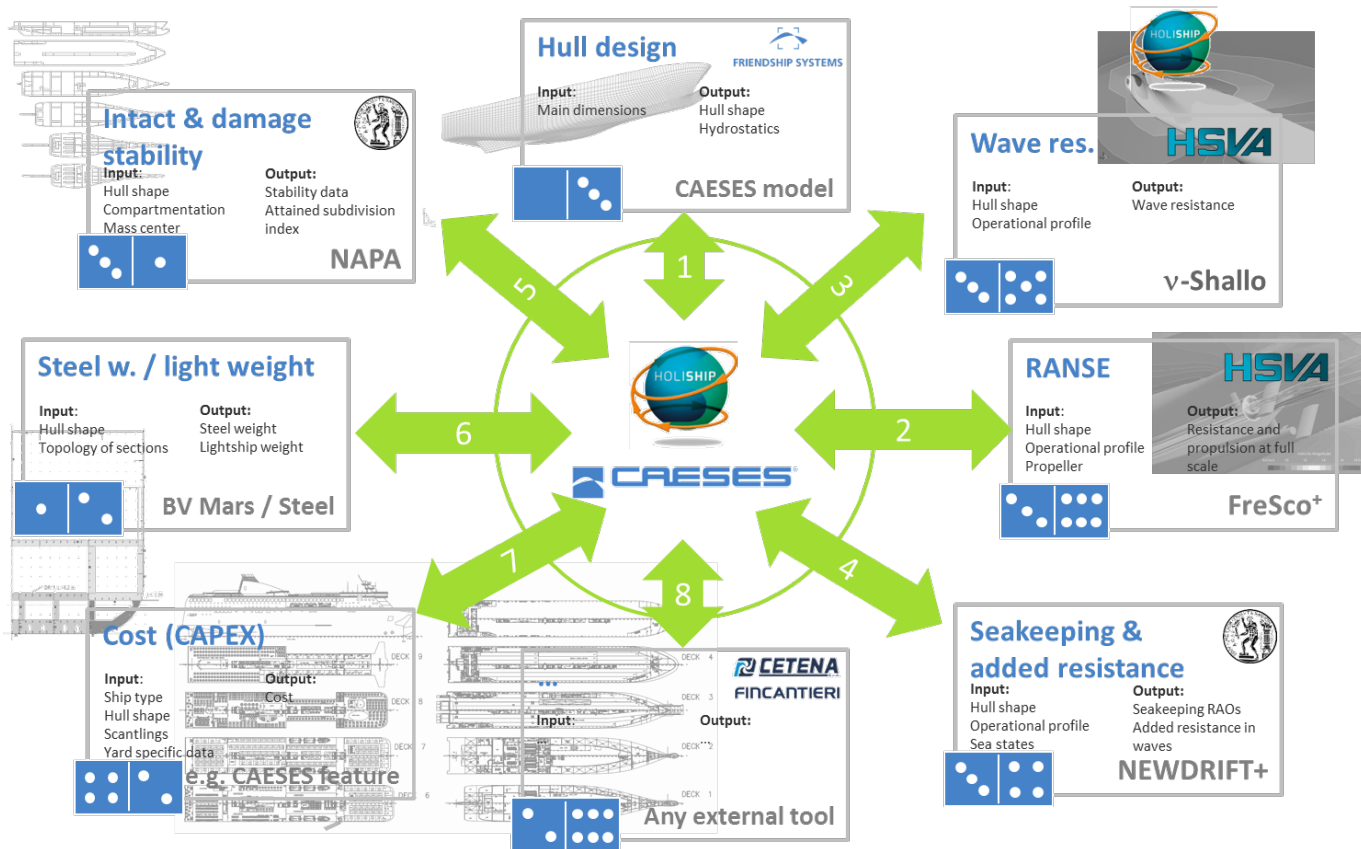

More than 2080 passengers and 300 cabins, more
than 1950 lane meter and payload above 3500 t

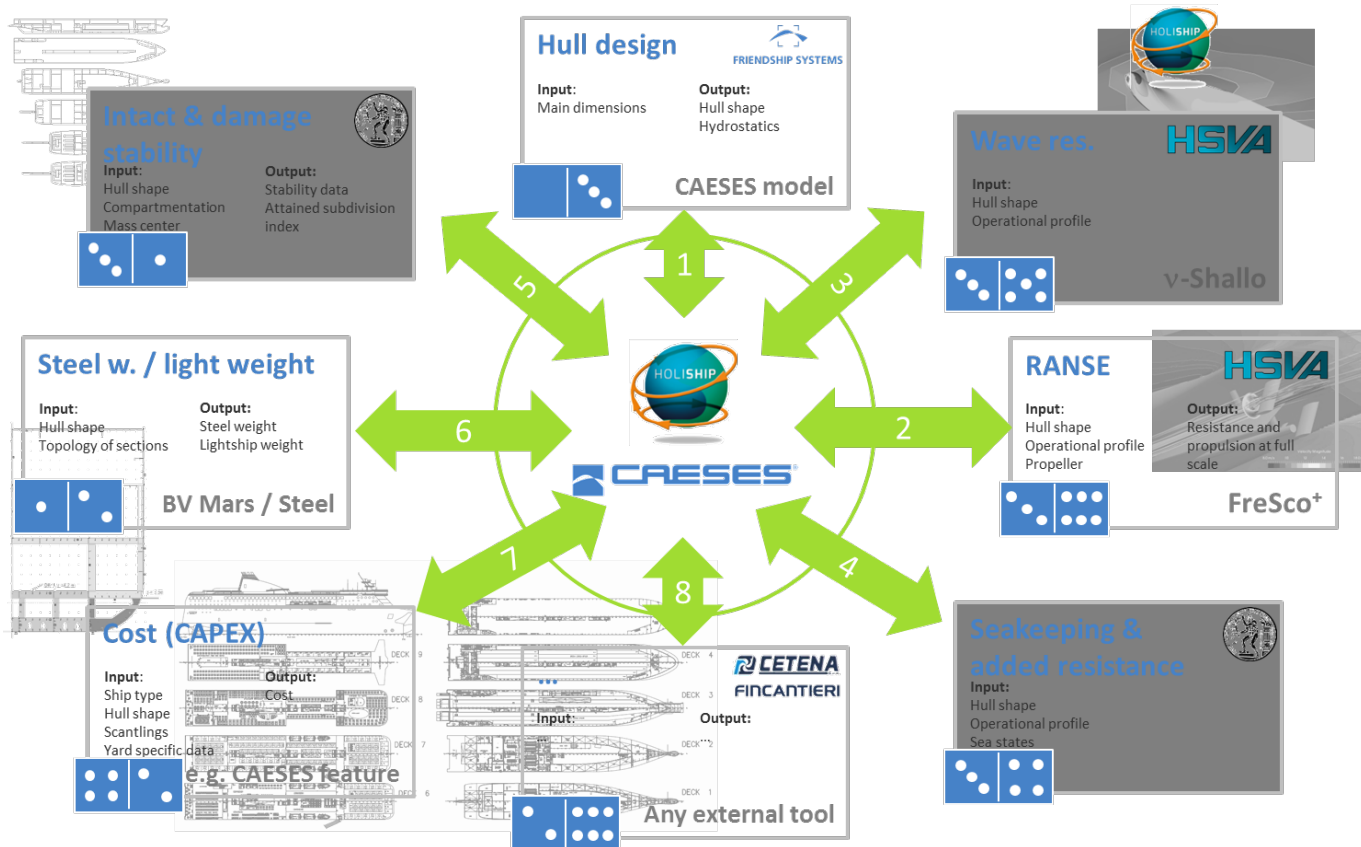

Length from 155 m to 170 m, beam from 27.6 m to
30.6 m and design draft from 6.5 m to 7.1 m
